Addendum- Important Safety Information

Cryogenic Fluid Compatibility

General – This document is a supplement to the product manual. Please refer to the product manual for additional safety information.

Chart dosing systems including, Ultradoser™, Cryodoser™, Inerter™, and Cryodoser FleX™ products are designed to be used with inert non-oxidizing cryogenic liquids including Nitrogen and Argon. Cryogenic liquids that are oxidizers, such as Oxygen and Nitrous Oxide should not be used in any Chart doser system.

Oxidizers pose potential safety hazards if they contact any hydrocarbon material or oily surfaces. Oxidizers can greatly increase the risk of fire, burns, and personal injury.

Any questions, comments or concerns about this configuration please contact Chart at 408.371.3303
